

Kata 1 - Sum the Largest Numbers

Assignment

45 - 60 minutes

Status

Complete

Some of the following katas deal with arrays and looping! If you're having some trouble completing these, you might find it helpful to revisit some of the previous exercises, such as ["Looping and Repetition"](#), ["Array Operations and Properties"](#), and ["Looping Over Arrays"](#). JavaScript *does* have some built-in helper functions for working with arrays such as `.sort`, `.map`, `.filter`, and others, but we highly recommend avoiding those functions while working through the prep katas.

In this exercise, we will be given an array of 2 or more numbers. We will then have to find the two largest numbers in that array, and sum them together.

Input

```
const sumLargestNumbers = function(data) {  
  // Put your solution here  
};  
  
console.log(sumLargestNumbers([1, 10]));  
console.log(sumLargestNumbers([1, 2, 3]));  
console.log(sumLargestNumbers([10, 4, 34, 6, 92, 2]));
```

Expected Output

```
11  
5  
126
```

Create a function named `sumLargestNumbers` that will receive an array of numbers and return the sum of the two largest numbers in that array.

Submit Your Work

- Browse to gist.github.com and create a new gist.
- Copy-and-paste your code into the form
- Name the gist and the file appropriately and click **Create secret gist**.
- Finally, mark this activity as completed (at the bottom of this page) and please copy/paste the *entire* browser URL for your gist (from *gist.github.com*) into the text field.
